SKILLS

- C++, Python, Git
- Fusion 360, Catia V5, CAD and CAO
- PCB design, Altium, EasyEDA
- MATLAB, Simulink, Stateflow
- Vibe coding and AI
- Mechatronics
- Latex, Office suite

INTERESTS

- Mountain Sports (Alpinism, climbing, ski touring, paragliding)
- Entrepreneurship

LANGUAGES

French
Native

German
Bilingual
Swiss German, Native

English
Fluent

QUALITIES

Leadership
Motivation and Commitment
Kindness

SUMMARY

Energetic, creative, and driven, I'm passionate about taking initiative and bringing ideas to life: when a project grabs me, I go all in.

I enjoy taking ownership of projects and leading teams where everyone feels like a rope partner, relaxed about the mood and serious about moving forward.

From Swiss Solar Boat to the mountains, my experiences have strengthened my determination and taught me judgement, resilience and teamwork.

EXPERIENCE

Lead Software Engineer - Low Voltage **09/2025 - Current**
Swiss Solar Boat - Lausanne

- Lead the low-voltage software team for the next competition season (since 09/2026).
- Co-pilot of energy and safety systems on the water; 1st place at the Monaco Energy Boat Challenge 2026 (05/2026 - 07/2026).
- Built, bench-tested and integrated the boat's low-voltage electronics with new CAN wiring; wrote the control logic coordinating every subsystem (09/2025 - 05/2026).

R&D Assistant - Surgical Robotics **03/2025 - 05/2025**
ARTORG Center for Biomedical Engineering Research - Bern

- Developed and optimized a force-sensing cochlear implant insertion tool.
- Validated it on 3D-printed cochlea and skull models through iterative lab testing.

Production manager and Engineer **01/2023 - 09/2024**
SteriLux - Renens

- Managed a production team building sterilization machines for veterinary surgical tools; kept work instructions up to date.
- Revised the Steribas motherboard: integrated a new pressure sensor and optimized the layout.

Project manager – Space Satellite **09/2022 - 03/2024**
EPFL Spacecraft Team - Lausanne

- Mini-satellite launched twice to 600m by a rocket and recovered by hand-sewn Rogallo parachute. Environmental measurements, GPS, camera.
- Assembled the "Twocan" on-board computer for the CHESS satellite mission.

EDUCATION

Master in Robotics – EPFL **09/2025 – Present**

Coursework: Model Predictive Control, Mobile and Medical Robotics, Machine learning, Manufacturing process.

Bachelor in Micro-engineering – EPFL **09/2021 – 07/2024**

Comprehensive training in the field of engineering, covering electronics, CAD, mechanics, programming and microengineering.
